Lia

the AI-powered platform for SAP
Integration Suite

Turn integration from a black box into
a transparent, manageable system —
monitored, built, and supported from
one place.

proven impact

95%

less time on
documentation

50%

faster migration projects

25%

dev time saved per
interface

24/7

proactive monitoring

ready to transform your
integration lifecycle?

— key benefits

cut support costs, resolve errors faster

AI root-cause analysis reads interface context and history, so teams
diagnose less and fix more.

accelerate development, consistently

Pre-built framework templates give every new interface a proven, best-
practice starting point.

visibility for the whole organization

A natural-language chatbot, governance dashboards, and dependency
mapping make the landscape clear to everyone.

governance to a single standard

Centralized version control, quality assessment, and monitoring keep
everything structured and auditable.

— platform capabilities

integration governance & insights

Filter, search, and map dependencies
to assess change impact.

AI error analysis

Turn SAP IS and Cloud ALM logs into
clear explanations with fixes.

interface generation

Standardized interfaces with
monitoring, alerting, and retry built in.

automated documentation

Sequence diagrams, configs, and
checklists — always current.

payload monitoring

Inspect message payloads in-platform
via SAP Cloud ALM.

integration chatbot

Ask about interfaces, dependencies,
and certificates in plain language.

migration tooling

Move from SAP PI/PO to Integration
Suite with guided execution.

development tools

AI-assisted Groovy, XSLT, and Excel-
to-graphical mapping.

unit testing

Validate interfaces before deployment
and catch issues early.

cross-industry by design

Lia works at the integration layer, not the
business-process layer — relevant to every
organization running SAP Integration Suite,
in any sector.

**we commit.
we deliver.**
